## Instruction for use for expansion joints

**154**

### Operation

This expansion joint extends or retracts in order to remove the rigidity of the steel pipes of an installation during its operation. In fact, the *tube 43* slides in the *body 1*, perfectly sealed thanks to the *O-rings 45* and the stuffing box system (a *packing nut 14* which pushes the *packing 12*, to adhere to the *body 1* and the *tube 43*).
